(a) two-temperature model, 7.5 nm, 75°
40 %, 301 GW cm−2
30 %, 90 GW cm−2
20 %, 24 GW cm−2
kernel, 30 %
drop of ωp (%)
time after the pump peak (fs)
(b) 220 fs pump at 1315 nm
single-shot damage of ITO
largest pump of Tirole et al.
damping fixed
damping rising
pump fluence (mJ cm−2)
largest drop of ωp (%)
(c) margin against the damping, 7.5 nm, 75°
40 % drop
30 % drop
two-temperature model
kernel of Tirole et al.
full wave
margin over the Rozanov limit
damping at the largest drop, γ/γ0
(d) heat left in the film
7.5 nm film, route 1
40 nm film of Tirole et al.
708 GW cm−2
100 GW cm−2
22 GW cm−2
film temperature after 2.5 ps (K)
largest drop of ωp (%)
